GOOD KARMA BRANDS

THIS WEEK

Samsung Galaxy S6 and Galaxy Edge Revealed, Official Announcement Coming March 1st ::

With less than a month to go before Samsung officially announces their next big flagship, CNET Korea has received a promotional image featuring the Galaxy S6 and the Galaxy Edge. This image, which follows suit to the leaks we've seen before, confirms that Samsung will have 2 variants of the next big thing.

The Galaxy S6 will feature a similar design to the previous iterations, although this time it will sport a metal frame and a protruding camera, suggesting a much more powerful update to the Galaxy's camera. It does also look like that the metal body does not feature the ability to remove the back panel and access the battery, but certainty won't be upon us until Samsung officially unveils the phones at the Mobile World Conference in Barcelona on March 1st.

Perhaps the most discussed rumor about the S6 is the inclusion of the curved screen seen on the Galaxy Note Edge. The leaked image reveals that there will be a second option for Galaxy users in the form of the Galaxy Edge. Although it is the same size and will feature the same frame as the S6, the Galaxy Edge will have a curved screen much like the Note Edge, only it looks to have the screen curve off of both sides as opposed to the single curve found on the Note.

Although nothing is for certain until the March 1st announcement, it definitely looks like Samsung is pulling out all the stops for the next big thing in what promises to be their most ambitious smartphone to date. ::

COMING IN HOT

Lumo Lift

It's not news to anyone that most of us don't have the best posture. With countless products and how-to's out there to improve our posture, it's no surprise that now our smart devices will contribute. With Lumo Lift, you can track your daily posture with a small bluetooth device that pins onto your clothing and communicates your posture throughout the day to your smart phone or tablet. Aside from posture, Lumo Lift can also track steps, calories burned, and other fitness centric features we've seen in many wearables. With it's coach feature, Lumo Lift will take the info it recieves and offer suggestions to better improve your day-to-day health. And with the newly-released styles, Lumo Lift can blend in with any outfit you wear.

You can order Lumo Lift through their website, and they're currently running a Valentine's deal to get a pair of Lumo Lifts for \$159.

DID YOU KNOW?

Samsung develops so many components for other phones that it's predicted that by this time next year, there will be just as many if not more Samsung parts in an iPhone than a Galaxy.

The most technologically efficient machine that man has ever invented is the book.

Northrop Frye

APP OF THE WEEK

ClickLight

Flashlight apps are nothing too special, most phones now come with a built in flashlight widget. But ClickLight adds some convenience. When active, you can simply doubletap your power button to toggle the light on or off.

TECH TEST

What does the "S" in "Galaxy S..." stand for?

A.) Speed B.) Samsung C.) Super D.) Series

Last Week's Answer: 70% of all cell phones use Samsung DRAM processing chips.
